LEARNING DIARY, MOBILE MODULE

LEARNING DIARY

8.1.2024

I started by reading through the various tabs on Moodle and then set up my environment.

I watched the first video and coded along with no issues.

9.1.2024

I watched the second video and coded along.

The only problem I encountered was about new package visibility restrictions. It took me a minute to fix the issue by adding a few lines of code to the project's manifest.

15.1.2024

I watched the third video and coded along.

I encountered a problem related to displaying the image in the detail activity. The image only showed in the design view and not in the emulator. To fix it, I had to create a new drawable resource for it to be displayed in the emulator. The problem seemed to be related to the original image I used being referred to by `@tool` instead of `@drawable`. This was before adding the images of the vegetables.

1.3.2024

I started working on the project, choosing to make a simple notebook application.

6.3.2024

I finished working on the project.
